# INFLUENZA UPDATES

## Diagnosis, Management, and Prevention in the Emergency Department

### *How effectively are you managing influenza in your emergency department?*

Emergency medicine physicians face the challenge of providing individualized, safe, and effective care for patients with influenza, especially individuals at high risk of complications. This CME activity will provide you with the tools you need to address these challenges.

### Program Overview

Join us as our expert faculty review the latest evidence, including:

- Criteria for patients at high risk of complications of influenza
- Recognition of patients who should receive antiviral therapy for influenza treatment or prophylaxis
- Data on the window of therapeutic efficacy for antiviral treatments
- Efficacy and safety of available antiviral therapies for influenza

### Target Audience

- Emergency medicine physicians

### Learning Objectives

Upon completion of this activity, learners should be better able to:

- **RECOGNIZE** factors that increase the risk of complications of influenza
- **RECOMMEND** age-appropriate vaccines to reduce the risk of complications and spread of influenza infection
- **COMPARE** the safety and efficacy of available antiviral therapies for prophylaxis and treatment of influenza
- **SELECT** effective antiviral treatment strategies for high-risk patients
